

ATTACHMENT E- to Land Use Committee Report
County Road Strategy

Extracted from the Road Transportation Report, LRPTF Transportation Committee
(March 16, 2006).

- The county needs a road improvement strategy for the future.

The county has many more roads that it can possibly improve and maintain. We need to determine where our limited funds can best be applied to get the most value.

Since collectors join local roads and arterials it is recommended that the county place their financial emphasis on collectors. Priority would depend on the VMT for each collector. Voters should be given the opportunity to support collector improvements through a bond election.

Local users, either developers or property owners using RSID's, should improve local roads that connect to collectors. Extension agreements should be made that allow for reimbursement by latecomers using the improvements.

Local roads should be fed into the designated collectors that connect to the arterials. Allowing arterial access only thru the limited number of collectors will maintain mobility on the arterials.
